ABOUT THIS REPORT

INTERNATIONAL ECONOMIC INDICATORS (IEI) provides a monthly look at 154 economic time series covering ten industrial countries (eighty of these series are unavailable from any other source.)

The basic research underlying the compilation began in 1974, under the direction of Dr. Geoffrey H. Moore and Dr. Philip A. Klein, following methodology for selecting and evaluating indicators for the U.S. economy (published by the U.S. Department of Commerce in *Business Conditions Digest*). Additional indicators and other countries will be included in the compilation as the Center's research program develops.

The dominant feature of IEI is the composite indexes section, in which leading and coincident cyclical indexes are presented for ten industrial countries and for groups of countries. These indexes have been shown to be useful in forecasting and interpreting fluctuations in output, employment, inflation, interest rates, and foreign trade. For more information, please contact:

NEW FEATURES AND CHANGES IN THIS ISSUE

Changes are made from time to time in IEI to incorporate recent findings of the Center's international business cycle research, newly available series, and revisions made by source agencies of the Center. These changes may result in revisions of data, additions or deletions of series, changes in the composition of indexes, etc.

Note: All series are adjusted for seasonal variations unless designated NSA. Series designated quarterly (Q) are interpolated monthly with the quarterly figure placed at the mid-month of the quarter.

For information on how to read the tables and on the average lead or lag for each indicator see the Appendixes in the latest June or December issue of IEI. Copies available on request.

November 1988 THE LATEST READING OF THE INTERNATIONAL INDICATORS

Summary: The leading indexes in seven of the ten major industrial countries showed a stronger growth rate in August or September than in the preceding month, averaging about 5 percent. This is not consistent with the idea of a continuing slowdown in 1989. The only country where the leading index is displaying clear weakness, that is, no growth, is Canada. The latest growth rates in the indexes of economic performance are concentrated around 4 percent, which is down from the 5 percent that was typical three months ago. The upshot is that some slowing in growth has been going on in most countries, but the leading indexes do not suggest that this will get deeper next year.
